

ABSTRACT OF THE DISCLOSURE

A sealing bellows is provided for a ball-and-socket joint having a ball with a pivot (6) originating from the ball and a housing (40) accommodating the ball. The sealing bellows extends between the pivot (6) and the ball housing. The sealing bellows has a pivot-side sealing area (12), a jacket area (13) and a housing-side sealing area (24) consisting of an elastomeric material.

5 At least one sealing area (12) consists of an elastomeric material different from that of the jacket area (13).
